What else changes it

- **Power:** damage x(0.6 + Power/100). Power 50 = x1.10, Power 90 = x1.50.
- **Size:** every 60 lb over 180 = +60% power, but his punches are 22% slower to throw and recover. A 240 lb man hits x1.6, and his bar is 15% bigger.
- **Heart bar full:** x1.5 for 6 s. **Out of stamina for that punch:** x0.5 and slower.
- **Injuries:** a hurt jaw makes head shots land up to +40%; hurt ribs make body shots land up to +67% and get through a body block more; a hurt hand takes up to 1/3 off your own punches.
- **Body shots** do 75% of the damage but drain his stamina 1.6x as fast. When his stamina hits zero while blocking, the guard breaks.
- **Good gloves** (gear) push more through a block. Every blocked punch also costs the blocker stamina.
- **Ducking** dodges jabs and hooks to the head; an uppercut into a duck is a counter. **Slipping back** dodges everything.
